

Pallet Bars

The **HFS Pallet lifting bars model #HFS-PB011** is specially designed to use via multi-leg slings – chains assembly.

These bars fit precisely into the pallets & hook design to secure them and keep the bars apart. The minimum distance between the two bars mounted should be **900mm**. The loads to be distributed centrally and evenly on both bars.

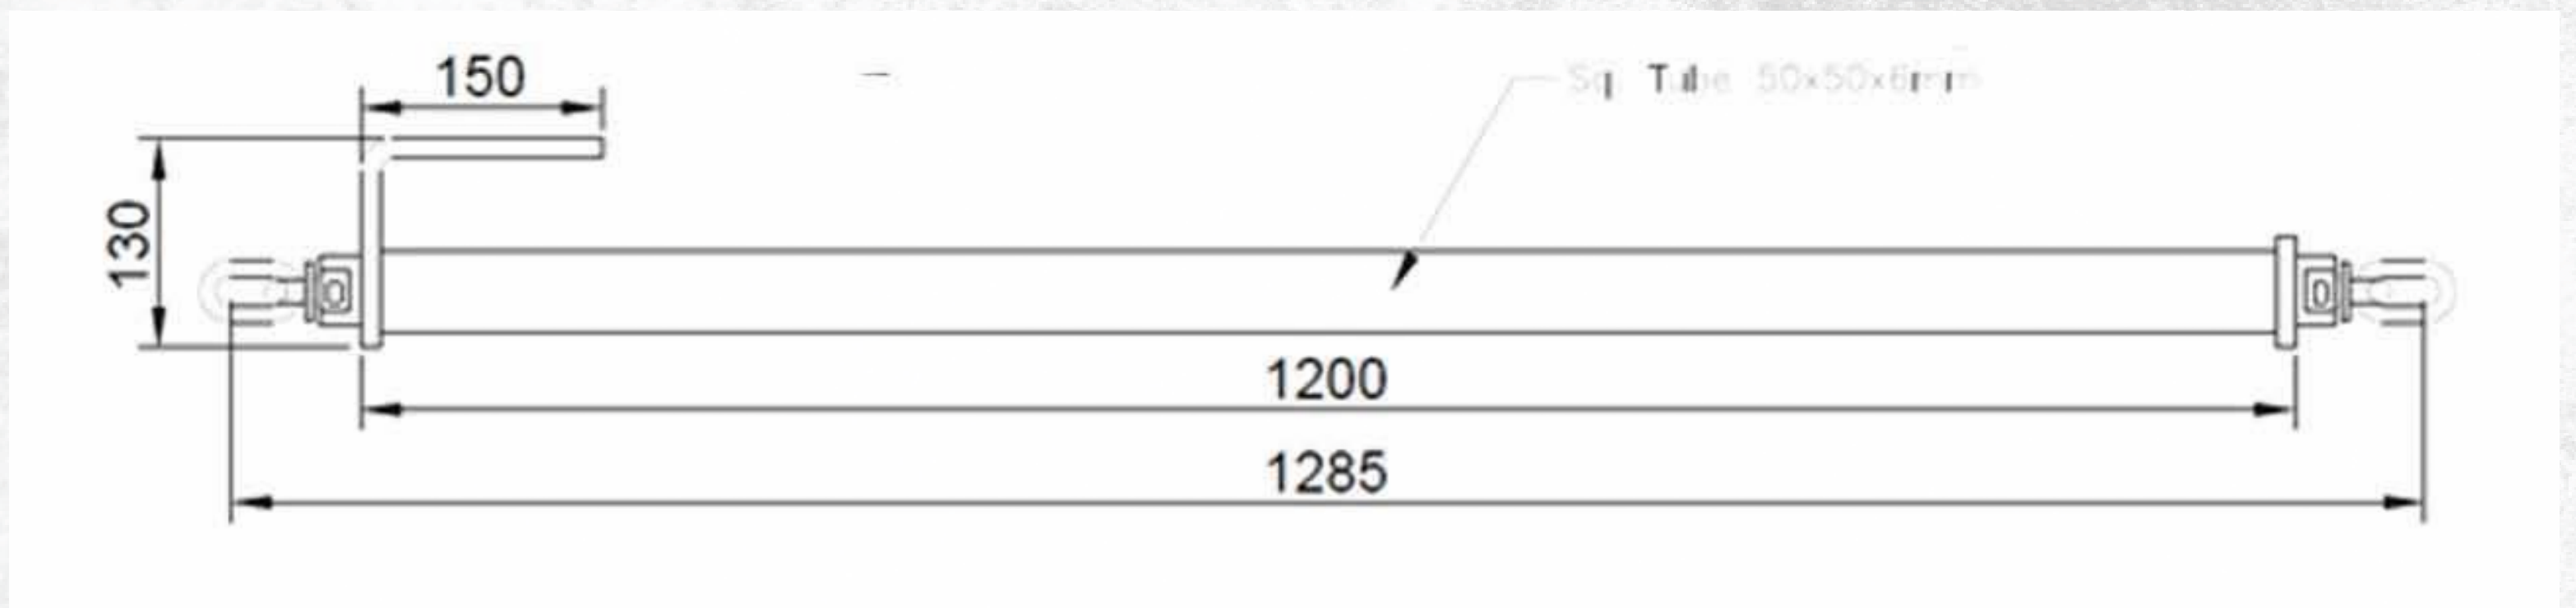

Pallet Bars Key Features:

- Weight Load Limit (WLL): **2 Tons** per pair
- End hook design to keep bars separated and secure; bars must be at least **900mm** apart
- Suitable for use with a variety of standard size pallets
- Weight: **24 kgs** per pair
- Dimensions: **1250mm** length

- > **HFS Pallet Lifting Bars** are safe and easy pallet lifters and most economical.
- > They have **WLL of 2 Tonnes** per pair.
- > Designed to use via multi leg slings chains assembly.
- > These bars fit precisely into the pallets & hook design to secure them & keep the bars apart.
- > The Bars need to be placed at opposite ends and are held secure with the **L-Shaped Hooks** that fixes at end of pallets. This ensures the bars are spread apart.
- > These bars are suitable for use on all **Standard Size Wooden Pallets**
